# BEAT

Seat diameter 35 cm

The idea behind BEAT is based on practical and mobile comfort. In times when many seem to minimize, often at the expense of comfort, we wanted to bring the good seat back. Therefore, it is designed as a floating seat with a practical grip hole in the middle.

With retro shape, BEAT ensures a contemporary experience. Good stacking is essential and has a positive impact on the environment it is in, and give the experience of good order. The funnel in the grip hole ensures that the BEAT stacks neatly, tightly, with exact precision.

Beat has no screws and the seat clicks into place. Beat comes with recycled seat in the colors Ocean green and Ocean black, and in other plastic colors in virgin polypropylene.
